x Catastrophic, or life threatening, haemorrhage is recognised as the leading cause of preventable death in trauma patients [1] and is also prevalent in medical conditions such as obstetric complications, gastrointestinal bleeding and surgical patients with intra-operative or post-operative complications [2,3]. Patients are at particular risk of deterioration in the pre-hospital environment.

Two comparable groups resulted: (1) families at high risk for whom the previous risk assessment provided a policy recommendation that the case be opened for services and (2) families at high risk, according to the recommended assessment,

for whom the previous risk assessment did not provide a policy recommendation that the case be open for services.

Precursors to IQ testing. Historically, even before IQ tests were devised, there were attempts to classify people into intelligence categories by observing their behavior in daily life. Those other forms of behavioral observation are still important for validating classifications based primarily on IQ test scores.
