ringberg castle on tegernsee pdf

A Type II supernova (plural: supernovae or supernovas) results from the rapid collapse and violent explosion of a massive star. A star must have at least 8 times, but no more than 40 to 50 times, the mass of the Sun (M_{\odot}) to undergo this type of explosion. Type II supernovae are distinguished from other types of supernovae by the presence of hydrogen in their spectra.

Type II supernova - Wikipedia

Messier 87 (also known as Virgo A or NGC 4486, generally abbreviated to M87) is a supergiant elliptical galaxy in the constellation Virgo. One of the most massive galaxies in the local Universe, it is notable for its large population of globular clusters—about 12,000 compared to the 150–200 orbiting the Milky Way—and its jet of energetic plasma that originates at the core and extends at ...

Messier 87 - Wikipedia

Historique des observations. En 1781, l'astronome français Charles Messier publie un catalogue de 103 objets astronomiques ayant l'apparence de nébulosité. Cette liste fut créée afin d'identifier les objets pouvant être confondus avec des comètes. Par la suite, chaque objet a été précédé de la lettre « M ».
