where a  $j$  refers to the input variables,  $W_{ij}$  is the weight of input node  $j$  on node  $i$  and function  $g$  is the activation function, which is normally a nonlinear function (e.g., sigmoid or Gaussian function) to transform the linear combination of input signal from input nodes to an output value. The training of an ANN is done by iterative modification of the weight values in the network to ...
